

Profile

Graduated Cybersecurity Engineer specializing in offensive security, with hands-on experience in penetration testing, reverse engineering, and vulnerability analysis across web, system, and embedded environments. Experienced in reverse engineering and static binary analysis using Ghidra during security assessments, as well as risk analysis and digital forensics in industrial environments. Regular Hack The Box and Capture The Flag (CTF) participant with a strong interest in vulnerability research, exploit development, and continuous skill improvement. Available immediately.

Skills

- **Penetration Testing:** Web applications and systems (Linux, Active Directory), security assessments of connected systems (IoT/industrial). Tools: Nmap, Metasploit, Burp Suite, OWASP ZAP, SQLMap.
- **Reverse Engineering & Vulnerability Research:** Ghidra, static binary analysis, vulnerability analysis, Shodan.
- **SOC / SIEM / SecOps:** Alert triage and investigation, incident response, log analysis, event correlation, IOC analysis, MITRE ATT&CK. Tools: Splunk, Wazuh, TheHive, Cortex.
- **Systems & Networks:** Linux, Windows, Active Directory, VPN, firewalls, LDAP, log management.
- **Programming & Scripting:** Python, Bash, PowerShell, C, Java, PHP, Go, JavaScript.
- **Governance & Risk Management:** Risk assessment, vulnerability identification, security recommendations.

Achievements

Ranked 12th nationally in France on Hack The Box.

2024

Blog technique cybersécurité

2026 - Présent

Maintains a technical cybersecurity blog featuring penetration testing write-ups, vulnerability analyses, and technical articles.

Link: <https://yassine-sabir.github.io/writeups/>

Professional Experience

Digital Forensics Intern (Final-Year Internship) EDF Lab Paris-Saclay
Industrial Programmable Logic Controller (PLC) Forensics

Palaiseau, France March 2025 – August 2025

Objective

- Develop a digital forensic methodology adapted to an industrial PLC.

Responsibilities

- Analyze the PLC architecture and operation.
- Design a methodology for data extraction and forensic analysis.
- Develop an automated forensic analysis tool.

Achievements

- Extracted data in 8 seconds without interrupting PLC operation.
- Developed a methodology reusable across multiple PLC models.
- Built a portable, cross-platform tool independent of proprietary hardware.

Technologies: Wireshark, Binwalk, Python.

Penetration Tester SODIMAS

Valence, France January 2024 – June 2024

Cybersecurity Assessment of a Connected Elevator Architecture

Objective

- Assess the security of the system and network architecture of connected elevator system.

Responsibilities

- Conduct risk assessments on elevator components.
- Perform penetration testing on local (IoT, Embedded systems) and remote devices (Cloud).
- Carry out static binary analysis through reverse engineering to identify vulnerabilities.

Achievements

- Produced detailed security assessment reports covering methodology, findings, and recommendations.
- Presented findings and remediation recommendations to engineering teams.

Technologies: Linux, Nmap, Ghidra, Shodan, Metasploit, SQLMAP, Burp Suite, FFUF, Hydra, Dirbuster, Gobuster, OWASP ZAP, Bash, Python.

Education

Dual Engineering Degree in Computer Science, Networks, and Cybersecurity. Grenoble INP ESISAR

Valence, France 2023-2025

Engineering Degree in Information Systems Security. ENSIAS

Rabat, Morocco 2021-2023

Certifications

AWS Security Certification – LetsDefend

In Progress

SIEM Engineer Certification – LetsDefend

April 2026

Projects

Reverse Engineering of Obfuscated Mobile Malware

March 2023 – June 2023

- Performed static and dynamic analysis of malicious Android applications.
- Analyzed disassembled code and identified obfuscation mechanisms.
- Characterized malicious behaviors.

Technologies: ApkTool, Dex2Jar, JD-GUI, Burp Suite, Frida

Linux Log Analysis Tool

April 2026 – June 2026

- Developed an incident detection tool based on Linux log analysis and correlation.
- Detects SSH and web attacks (brute force, SQL injection, XSS, IDOR).
- Generates automated incident reports.

Technologies: Python, Regular Expressions (Regex)

Languages

Arabic: Native

French: Fluent

English: Advanced (B2 – TOEIC: 850/990)
